Val Tannen is a Professor of Computer and Information Science. He came to the University of Pennsylvania in 1987 after receiving his Ph.D. from Massachusetts Institute of Technology. Professor Tannen's current research is on technologies for the integration of heterogenous distributed information sources with particular applications to bioinformatics and biology. He is currently leading two projects that develop essential IT infrastructure for NSF-sponsored research in evolutionary biology. His general research interests include programming languages, databases, parallel processing, logic in computer science, and biological data modeling.
